recently introduced a new technology for making steel in its Bokaro plant; and

(b) if so, what are the details in this regard and to what extent it is likely to improve its quality?

THE MINISTER OF STEEL AND MINES (SHRI K. C. PANT): (a) The Research and Development Centre of SAIL has sueessfully introduced the combined blowing technology at Bokaro Steel Plant under a UNDP developmental programme. Trial runs were successfully conducted in one converter from 25th August, 1986.

(b) The process consists of injecting oxygen from the top and inert gas from the bottom. Preliminary results indicate improvement in steel making operations, reduced ferroalloy consumption and improvement in the yield of steel by 0.5 to 1 per cent. It is also expected that the process will improve the quality of steel. Detailed and exact evaluation of the process will be carried out after stabilisation of the operations through sustained trials and usage.

SAIL also propose to introduce the combined blowing technology in all the combined blowing technologv in all the converters at Bokaro, Bhilai and Rourkela in a phased manner.

Discovery of Kimberlite in Andhra Pradesh

1126. SHRI R. SAMBASIVA RAO: Will the Miinister of STEEL AND MINES be pleased to state:

(a) whether it is a fact that a new kimberlite, which is the primary source of diamonds has recently been discovered in Andhra Pradesh; and

(b) if so, what are the details in this regard?

THE MINISTER OF STEEL AND MINES (SHRI K. C. PANT); (a) Yes, Sir. Two new Kimberlite pipes • have recently been discovered in Anantapur dstrct of Andhra Pradesh.

(b) Two Kimberite pipes have been found, one near Venkatampalle and the other near Lattavaram Tande by National Geography Research Institute and Geological Survey of India respectively. Initial treatment of samples have indicated that the pipes are diamond bearing. Further work' by GSI to determine the incidence of diamonds in the two pipes is in progress.
